

in accordance to Commission Regulation (EU) 2015/830 of 28 May 2015

### Section 1: Identification of the substance / mixture and of the Company

#### 1.1 Identification of the product, substance or mixture

Product identifier 802145,802146,802208,802975,802977,802978,802979,712190,802181,802179,802188 (I.S71TGS).

#### 1.2 Relevant identified uses of the substance or mixture and uses advised against

Self-shielded flux cored wire for metal arc welding.

#### 1.3 Details of the supplier of the safety data sheet

Supplier TELWIN SPA  
Street address Via della Tecnica, 3  
Country 36030 VILLAVERLA (VI)  
Telephone number +39 0445 858811  
Fax +39 0445 858800  
\* e-mail address telwin@telwin.com

#### 1.4 Emergency telephone number

+39 0445 858811 (working hours)

### Section 2: Hazards identification

#### 2.1 Classification of the substance or mixture

This product doesn't meet the criteria of classification in any hazard class according to the applicable Regulations. However the form in which product is placed on the market does not present a danger, such preparations do not require a label.

#### 2.2 Label elements

No labelling applicable.

#### 2.3 Other hazards

- Results of evaluation of PTB and vPvB substances: the flux cored wire does not meet the criteria for PBT or vPvB in accordance with Annex XIII.
- Heat: spatter and melting metal can cause burn injuries.
- Radiation: UV, IR radiations. Arc ray can severely damage eyes or skin.
- Fumes: formation of dangerous fumes during use. Inhalation of welding fumes may cause respiratory irritation. Cough. Excessive or prolonged inhalation of fumes may cause metal fume fever.
- Electricity: electric shocks can kill.
- Magnetic fields: persons with a pacemaker should not go near welding or cutting operations until they have consulted their doctor and obtained information from the manufacturer of the device.
- Noise: Noises generated by welding equipment could damage auditory system.

### Section 3: Composition/information on ingredients

#### 3.1 Substances

Not applicable.

#### 3.2 Mixtures

The substances in the preparation are as follows:

Name of the substance	Range of concentration	CAS Number	EC Number	REACH Number	Hazard class	hazard statements
					According to European Regulation 1272/2008	
Iron	88 - 95 %	7439-89-6	231-096-4	01-2119462838-24	-	-
Calcium fluoride  GHS08	1 - 5 %	7789-75-5	232-188-7	-	STOT RE 1	H372
Strontium fluoride  GHS07	1 - 5 %	7783-48-4	232-000-3	17-2119879176-25	Skin Irrit. 2 Eye Irrit. 2	H315 H319
Aluminium	2 - 4 %	7429-90-5	231-072-3	01-2119529243-45	-	-
Magnesium  GHS02	0.5 - 2.0 %	7439-95-4	231-104-6	01-2119537203-49	Flam. Sol. 1 Self-heat. 1 Water-react. 2	H228 H252 H261
Manganese	0.5 - 1.5 %	7439-96-5	231-105-1	01-2119449803-34	-	-
Silicon	< 1 %	7440-21-3	231-130-8	-	-	-
Potassium silicate   GHS05 GHS07	< 1 %	1312-76-1	215-199-1	01-2119456888-17	Skin Corr. 1B Eye Dam. 1 STOT SE 3	H314 H318 H335

### Section 4: First aid measures

#### 4.1 Description of first aid measures

Welding fume inhalation: assure fresh air breathing. Obtain medical attention if breathing difficulty persists.

Skin contact with hot metal: Flush with plenty of water. Seek medical advice. Seek medical attention if burns develop. Take off immediately all contaminated clothing.

Eye contact with hot metal: rinse immediately with plenty of water. Seek medical attention immediately. Seek In case of burns from radiations, seek medical attention.

in accordance to Commission Regulation (EU) 2015/830 of 28 May 2015

#### 4.2 Most important symptoms and effects, both acute and delayed

See 2.3.

#### 4.3 Indication of any immediate medical attention and special treatment needed

No additional information available.

### Section 5: Firefighting measures

#### 5.1 Extinguishing media

Suitable: powder, carbon dioxide.

Unsuitable: water.

#### 5.2 Special hazards arising from the substance or mixture

The product for arc welding process is not flammable.

#### 5.3 Advice for firefighters

Do not enter fire area without proper protective equipment, including respiratory protection.

### Section 6: Accidental release measures

#### 6.1 Personal precautions, protective equipment and emergency procedures

Not applicable.

#### 6.2 Environmental precautions

Not applicable.

#### 6.3 Methods and material for containment and cleaning up

Solid product: collect with mechanical equipments, sweep or shovel into suitable containers.

#### 6.4 Reference to other sections

Section number 8 and 13.

### Section 7: Handling and storage

#### 7.1 Precautions for safe handling

No special precautions necessary the product. During its use, a system of aspiration system and/or ventilation such as to ensure the fulfillment of exposition standards shall be planned.

Do not eat, drink and smocking in the workplaces. Wash hands shower when leaving the working areas. Remove contaminated clothes and protective equipment before to enter in the areas where you eat.

#### 7.2 Conditions for safe storage, including any incompatibilities

Avoid the contact with chemical substances like acids or bases

High-density solid product. Avoid storage in unstable positions

#### 7.3 Specific end use(s).

Not applicable.

### Section 8: Exposure controls/personal protection

#### 8.1 Control parameters

The following substances may be produced during the welding process in the fume:

Substance	CAS Number	TLV-TWA [mg/m <sup>3</sup> ] *	Gestis Limit value (8 h) [mg/m <sup>3</sup> ] **
Fe oxides (powder and fumes as Fe)	1309-37-1	5	5
Manganese and inorganic compounds (as Mn)	7439-96-5	0.2	0.2
Manganese, fume or respirable dust	7439-96-5		0.2
Silicon oxides (as Si fumes)	69012-64-1	2	
Particles not otherwise classified (PNOC)		3	
Ozone	10028-15-6	0.2	0.2
Fluorides (as F)		2.5	2.5
Aluminium metal and insoluble compounds	7429-90-5	1	1
Magnesium oxide, fume	1309-48-4	10	10

\* References of TLV limit values taken from "Giornale degli Igienisti Industriali", April 2011 \*.

\*\* Reference IFA limit values taken from IFA ((Institute for Occupational Safety and Health). Date of update: June 2016

#### 8.2 Exposure controls

- Protection in case of insufficient ventilation: wear suitable respiratory equipment. Do not breathe gas/fumes/vapour.
- Hand protection: Welding gloves.
- Skin protection: Skin protection appropriate to the conditions of use should be provided.
- It is recommended to use of Exposure Scenario in addition to the provided information.

### Section 9: Physical and chemical properties

#### 9.1 Information on basic physical and chemical properties

PROPERTIES	VALUE
Appearance	Solid, grey
Odour	Odourless

in accordance to Commission Regulation (EU) 2015/830 of 28 May 2015

Odour threshold	Not applicable
pH	Not applicable
Melting point/freezing point [°C]	ca 1500 / Not applicable
Initial boiling point and boiling range	No data available
Flash point	No data available
Evaporation rate	No data available
Flammability (solid, gas)	No data available
Upper/lower flammability or explosive limits	No data available
Vapour pressure	No data available
Vapour density	No data available
Relative density [kg/dm <sup>3</sup> ]	~ 7
Solubility(ies)	No data available
Partition coefficient: n-octanol/water	No data available
Auto-ignition temperature	No data available
Decomposition temperature	No data available
Viscosity	No data available
Explosive properties	No data available
Oxidising properties	No data available

### 9.2 Other information

No additional information available.

## Section 10: Stability and reactivity

### 10.1 Reactivity

None under normal conditions.

### 10.2 Chemical stability

Stable under normal conditions (< 300°C).

### 10.3 Possibility of hazardous reactions

None under normal conditions.

### 10.4 Conditions to avoid

None under normal conditions.

### 10.5 Incompatible materials

Contact with chemical substances like acids or bases, this product could cause generation of gas.

### 10.6 Hazardous decomposition products

Formation of dangerous fumes during use. Welding fumes are classified carcinogen by the IARC (International Agency for Research on Cancer): Group 2B Cancer suspected agent. The amount of fumes generated change with the welding parameters and the diameters of the consumable; it could be develop from the reaction of oxidation of the components listed in section 3 or included in the base material.

## Section 11: Toxicological information

### 11.1 Information on toxicological effects

Acute toxicity	Not classified
Skin corrosion/irritation	Not classified
Serious eye damage/irritation	Not classified
Respiratory or skin sensitisation	Not classified
Germ cell mutagenicity	Not classified
Carcinogenicity	See Section 8 and 10 for welding fumes
Reproductive toxicity	Not classified
STOT-single exposure	Not classified
STOT-repeated exposure	See Section 8 and 10 for welding fumes
Aspiration hazard	Not classified

## Section 12: Ecological information

### 12.1 Toxicity

The flux cored wire, in massive form, don't present hazards to the environment. Avoid the condition that can lead to their corrosion and the release of the metals in the environment.

### 12.2 Persistence and degradability

The flux cored wire, in massive form, don't present hazards to the environment. Avoid the condition that can lead to their corrosion and the release of the metals in the environment.

### 12.3 Bioaccumulative potential

The flux cored wire, in massive form, don't present hazards to the environment. Avoid the condition that can lead to their corrosion and the release of the metals in the environment.

### 12.4 Mobility in soil

The flux cored wire, in massive form, don't present hazards to the environment. Avoid the condition that can lead to their corrosion and the release of the metals in the environment.

### 12.5 Results of PBT and vPvB assessment

The flux cored wire, in massive form, don't present hazards to the environment. Avoid the condition that can lead to their corrosion and the release of the metals in the environment

in accordance to Commission Regulation (EU) 2015/830 of 28 May 2015

### 12.6 Other adverse effects

The flux cored wire, in massive form, don't present hazards to the environment. Avoid the condition that can lead to their corrosion and the release of the metals in the environment

## Section 13: Disposal considerations

### 13.1 Waste treatment methods

Regional legislation (waste): Dispose in a safe manner in accordance with local/national regulations.

Waste code for the industrial waste according to Commission Decision 2014/955/EU:

-12 01 02: powder and particulate of ferrous materials.

-12 01 13: welding wastes.

## Section 14: Transport information

### 14.1 UN number

Product is not classified as dangerous good for transport and have no UN number

### 14.2 UN proper shipping name

Not applicable.

### 14.3 Transport hazard class(es)

Not applicable.

### 14.4 Packing group

Not applicable.

### 14.5 Environmental hazards

The product is not environmentally hazardous according to the criteria of the UN Model Regulations (as reflected in the IMDG Code, ADR, RID and ADN) and/or a marine pollutant according to the IMDG Code.

### 14.6 Special precautions for user

There are no any special precautions  
No additional information available..

### 14.7 Transport in bulk according to Annex II of Marpol and the IBC Code

Not applicable.

## Section 15: Regulatory information

### 15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

Further rules, limitations and legal prescriptions: Directive ROHS 2011/65. Can be used in the fabrication of electric and electronic devices.

### 15.2 Chemical safety assessment

No chemical safety assessment has been carried out for the product.

## Section 16: Other information

The contents and the format of this safety data sheet comply with the Commission Regulation (EU) 2015/830, Regulation (EC) No. 1907/2006 and Regulation (EC) No 1272/2008 (CLP Regulation).

### FULL TEXT OF HAZARD CLASSES AND HAZARD STATEMENT USED IN SECTION 3

Flam. Sol. 1: Flammable solid Hazard category 1;  
Water-react. 2: Substance or mixture which in contact with water emits flammable gas Hazard category 2;  
Self-heat. 1: Self-heating substance or mixture Hazard category 1;  
Skin Corr. 1B: Skin corrosion/irritation Hazard category 1B;  
Eye Dam. 1: Serious eye damage/eye irritation Hazard category 1;  
STOT SE 3: Specific target organ toxicity - single exposure Hazard category 3;  
STOT RE 1: Specific target organ toxicity (repeated exposure), category 1;  
Skin Irrit. 2: Skin corrosion/irritation Hazard category 2;  
Eye Irrit. 2: Serious eye damage/eye irritation Hazard category 2;  
H228: Flammable solid.;  
H252: Self-heating in large quantities; may catch fire.;  
H261: In contact with water releases flammable gases.;  
H314: Causes severe skin burns and eye damage;  
H315: Causes skin irritation.;  
H319: Causes serious eye irritation.;  
H318: Causes serious eye damage.;  
H335: May cause respiratory irritation.;  
H372: Causes damage to organs (lungs) through prolonged or repeated exposure (inhalation).

### LEGEND:

- ✓ PBT: persistent, bio accumulative and toxic;
- ✓ vPvB: very persistent and very bio accumulative;
- ✓ TLV-TWA: threshold limit value - time weighted average;

in accordance to Commission Regulation (EU) 2015/830 of 28 May 2015

**DISCLAIMER OF LIABILITY :** The information in this sheet is based on the knowledge available when it was published. The user must ensure that the information is applicable and exhaustive for the application. The information contained in this sheet is only applicable for this product. The product must not be used for any application that is not allowed, in this case we will not be responsible for any damage caused. The user must respect current Safety, Health and Environmental legislation. This information concerns Safety and is not a substitute to the technical data of the product. This sheet cancels and replaces the previous ones.

## EXPOSURE SCENARIO

### Welding Exposure Scenario WES - ENGL

EWA2011

#### Recommendations for Exposure Scenarios, Risk Management Measures and to identify Operational Conditions under which metals, alloys and metallic articles may be safely welded

Welding/Brazing produces fumes which can affect human health and the environment. Fumes are a varying mixture of airborne gases and fine particles which, if inhaled or swallowed, constitute a health hazard. The degree of risk will depend on the composition of the fume, concentration of the fume and duration of exposure. The fume composition is dependent upon the material being worked, the process and consumables being used. coatings on the work such as paint. galvanizing or plating, oil or contaminants from cleaning and degreasing activities. A systematic approach to the assessment of exposure is necessary, taking into account the particular circumstances for the operator and ancillary worker that can be exposed.

Considering the emission of fumes when welding, brazing or cutting of metals. It is recommended to (1) arrange risk management measures through applying general information and guidelines provided by this exposure scenario and (2) using the information provided by the Safety Data Sheet, issued in accordance with REACH, by the welding consumable manufacturer.

The employer shall ensure that the risk from welding fumes to the safety and health of workers is eliminated or reduced to a minimum. The following principle shall be applied:

- 1- Select the applicable process/material combinations with the lowest class, whenever possible.
- 2- Set welding process with the lowest emission parameter.
- 3- Apply the relevant collective protective measure in accordance with class number. In general, the use of PPE is taken into account after all other measures is applied.
- 4- Wear the relevant personal protective equipment in accordance with the duty cycle.

In addition, compliance with the National Regulations regarding the exposure to welding fumes of welders and related personnel shall be verified.

In the table "Risk Management Measures for individual process / material combinations" below, reference is made to the following standards for collective and personal protection measures:

	Welding process Reference Numbers according to ISO 4063
ISO 4063	Health and safety in welding and allied processes - Requirements testing and marking of equipment or air filtration - Part 1: Testing of the separation efficiency for welding fume
EN ISO 15012-1 :2004	Health and safety in welding and allied processes - Requirements, testing and marking of equipment for air filtration - Part 2: Determination of the minimum air volume flow rate of captor hoods and nozzles
EN ISO 15012-2:2008	Respiratory protective devices - Filtering half masks to protect against particles - Requirements, testing, marking (FFP1 - FFP2 - FFP3)
EN 149:2001	Respiratory protective devices. Light duty construction compressed air line breathing apparatus incorporating a helmet or a hood. Requirements, testing, marking (LDH1 - LDH2 - LDH3).
EN 1835:2000	Respiratory protective devices. Powered filtering devices incorporating a helmet or a hood. Requirements, testing, marking (TH1 - TH2 - TH3).
EN 12941:1998	Respiratory protective devices - Particle filters - Requirements, testing, marking (P1, P2, P3)
EN 143:2000	Article 6.2 on the protection of the health and safety of workers from the risks related to chemical agents at work
Directive 1998/24/EC	Benutzung von Atemschutzgeräten (Berufsgenossenschaftliche Regel für Sicherheit und Gesundheit bei der Arbeit)
BGR 190	Schweisstechnische Arbeiten (Technische Regeln für Gefahrstoffe)
TRGS 528	

in accordance to Commission Regulation (EU) 2015/830 of 28 May 2015

Also in the table "Risk Management Measures for individual process/ material combinations", reference is made to footnotes.

The description of these footnotes:

1. Class: approximate ranking to mitigate risk by selecting process/material combinations with the lowest value. Identified collective and individual risk management measures shall be applied
  2. Personal Protective Equipment (PPE) required avoiding exceeding the National Exposure Limit Value (DC: Duty cycle expressed on 8 hours)
  3. General Ventilation (GV) Low. With additional Local Exhaust Ventilation (LEV) and extracted air to the outside, the GV or LEV capacity may be reduced to 1/5 of the original requirement.
  4. General Ventilation (GV) Medium (double compared to Low)
  5. Filtrating half mask (FFP2)
  6. When an alloyed consumable is used, measures from "Class V" are required
  7. General Ventilation (GV) Low. When no Local Exhaust Ventilation, the ventilation requirement is 5-fold
  8. Filtrating half mask (FFP3), helmet with powered filters (TH2/P2). or helmet with external air supply (LDH2)
  9. Reduced (negative) pressured Area: A separate, ventilated area where reduced (negative) pressure, compared to the surrounded area. is maintained
  10. Local Exhaust Ventilation (LEV) High, extraction at source (includes table, hood, arm or torch extraction)
  11. Helmet with powered filters (TH3/P3), or helmet with external air supply (LDH3)
  12. Local Exhaust Ventilation (LEV) Low. extraction at source (Includes table. hood, arm or torch extraction)
  13. Local Exhaust Ventilation (LEV) Medium, extraction at source (includes table, hood. arm or torch extraction)
  14. Recommended measures to comply with national maximum allowable limits. Extracted fumes. for all materials except unalloyed steel and aluminium, shall be filtered before release in the outside environment.
  15. A confined space, despite its name, is not necessarily small. Examples of confined spaces include ship, silos, vats, utility vaults, tanks, etc.
  16. Improved helmet. designed to avoid direct flow of welding fumes inside
- "n.a" Not applicable  
"n.r." Not recommended

in accordance to Commission Regulation (EU) 2015/830 of 28 May 2015
